SECTION 2.1: SPECIFICATIONS

Comment on safety and utility for operational categories of Fire & Rescue Service uniform

Prospective Suppliers are urged to consider that the Fire & Rescue working environment is physically intense and exposure to high temperature environments and debris strewn scenes are commonplace.

In ensuring rapid response to emergencies, it is usual for firefighters to don personal protective outer wear (bunker gear) over their station wear or officer wear.

On scene, there are times when firefighters will be working in conditions that may not necessitate the need for outer bunker wear such as structural firefighting ensembles and may be granted permission to work in station T-shirts or in the inner wear that they were wearing at time of response.

To ensure the best possible protection for firefighters; the Western Cape Chief Fire Officers Committee (CFOcom) has adopted the NFPA 1975 Standard on Station/Work Uniforms for Fire and Emergency Services as best practice.

NFPA 1975 attempts to eliminate dangerous fabrics and establish a degree of protection for work uniforms. It addresses such issues as thermal stability and flame resistance as they pertain to fabrics that melt, drip, burn, stick to the skin, and cause burns to the wearer. Critical to this, is the statement made in NFPA 1975 “that no part of the uniform garment shall “ignite, melt, drip, or separate” when exposed to a heat of 500°F [260°C] for 5 minutes” and that the requirement of Thermal Stability Test One shall be met.

If the fabric for work uniforms is advertised as “flame resistant”, then the flame resistance test shall have an average char length of not more than 150mm and shall have an average after flame of not more than 2.0 seconds and shall not melt or drip.

The adoption of the NFPA 1975 Standard is in line with the intents of the Occupational Health & Safety Act, Act 85 of 1993 and this is considered non-negotiable in terms of achieving a standard of reasonable protection for the firefighter in terms of personal protection whether in bunker gear or not.

Care and durability are also factors that are considered critical in ensuring that uniforms last longer and maintain their appearance whether due to repeated washing, staining, and perspiration, etc. In consideration of the work environment durability also refers to the ability of the garments to retain their integrity under extreme physical work that will require constant bending, stooping and sometimes crawling through narrow spaces. Colour fastness and appearance is also just as relevant as firefighters work in a uniformed shift work environment which will require constant laundering of uniforms. As the personal issuing of uniform is strictly controlled; it is expected that colour fastness and reasonable resistance to fading will assist in ensuring that uniforms last longer. For these reasons it is expected that suppliers will ensure that full account of adherence to the relevant SANS Textile Standards is maintained and proven upon request from the requesting party.

SECTION 4.6: MBD9: CERTIFICATE OF INDEPENDENT BID DETERMINATION

1. This Municipal Bidding Document (MBD) must form part of all bids¹ invited.
2. Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging). ² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
3. Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
4. This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
5. In order to give effect to the above, the attached Certificate of Bid Determination (MBD9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
